4 **Advisory and Recommendations**  
5

6 **Title: Strategies for Mobile Integrated Health-Community Paramedicine (MIHCP) and**  
7 **Funding and Reimbursement.**  
8

9 As prepared by the Subcommittee on Sustainability and Efficiency  
10

11 **A. Executive Summary:**

12 America is rapidly aging and at the same time, is losing physician providers at an alarming  
13 rate. Each year there are more than 1 billion visits to physician offices, this number is  
14 expected to increase as our population ages. Access to primary care physicians varies across  
15 the nation with some communities having vast resources while others have sparse or no  
16 resources at all. The Association of American Colleges (AAMC) estimates that by 2034,  
17 there will be shortages of up to 48,000 primary care physicians and 77,000 non-primary care  
18 physicians. While some providers and healthcare organizations are augmenting physicians by  
19 utilizing nurse practitioners and physician assistants, there remain gaps across the nation with  
20 various State, Local, Tribal and Territorial areas that struggle with readily available  
21 healthcare resources.  
22

23 Data from the Centers for Disease Control and Prevention (CDC) indicates there are  
24 approximately 140,000,000 visits to emergency rooms in the US annually. It is estimated that  
25 approximately 27% of these visits could have been treated in urgent care centers, clinics,  
26 physician offices, and other locations resulting in a savings of 4.4 billion dollars a year.  
27 Mobile Integrated Health-Community Paramedicine (MIHCP) is an important part of the  
28 EMS system and can play a vital role in providing access and care to individuals in the out of  
29 hospital setting. MIHCP can play a vital role in meeting the Institute for Healthcare  
30 Improvements (IHI) Quadruple Aim's overarching goals of reducing costs, improving patient  
31 health, and improving quality of care. To be successful, the MIHCP system must be  
32 adequately supported, including payment of services by both government and commercial  
33 insurers.  
34

35 **B. Recommendations**  
36

37 **National Emergency Medical Services Advisory Council (NEMSAC)**  
38

39 **Recommendation 1:** NEMSAC shall, on a biennial basis, investigate and review funding  
40 mechanisms and opportunities available to enhance the development and sustainability of  
41 Mobile Integrated Health and Community Paramedic Programs until such time as  
42 established and adequate government payor rules are in place.

43 **National Highway Traffic and Safety Administration (NHTSA) Office of EMS**  
44 **(OEMS)**

45 **Recommendation 1:** NHTSA should work with the National Association of State EMS  
46 Officials (NASEMSO) to develop messaging for state EMS offices that can be used to  
47 communicate the benefits of establishing MIHCP programs and payment and  
48 reimbursement models through state Medicaid programs and licensed commercial insurance  
49 payors. Communications should be directed to the state insurance commissioner and/or  
50 other entities that have oversight of government and commercial payors within their states.

51 **Federal Interagency Committee on Emergency Medical Services (FICEMS)**

52 **Recommendation 1:** FICEMS will ask, through its CMS representative, that the  
53 appropriate CMS sector will identify and work with stakeholders that are operating MIHCP  
54 programs that have demonstrated improved patient access to health care for specific and/or  
55 various populations, a reduction in hospital admissions and an overall reduction in health  
56 care cost, to develop a toolbox to include best practices, and evaluate pathways where  
57 MIHCP funding concepts can be built.

58  
59 **Recommendation 2:** FICEMS will ask, through its CMS representative, to develop a  
60 national payment model for mobile integrated health and community paramedicine  
61 recognizing the value and cost savings associated with improving access to health care,  
62 improving the health of the population, reducing hospital admissions and per capita cost of  
63 health care.

64  
65 **C. Scope and Definition**

66  
67 **Scope:**

68 The scope of this Advisory is to set a foundational, continuously updating Advisory that  
69 reviews real-time, Treatment in Place, funding matters as nimbly as possible to assist the  
70 Secretary, OEMS, FICEMS and the EMS Industry in achieving sustainable MIHCP  
71 organizations.

72  
73 **Definitions:**

- 74  
75 • **Mobile Integrated Health-Community Paramedicine (MIHCP):** The provision of  
76 healthcare using patient-centered- mobile resources in the out-of-hospital environment.  
77 • **Community EMS (CEMS):** Community EMS, or community paramedicine, is a healthcare  
78 model that uses emergency medical services (EMS) providers to provide primary care and  
79 other services to patients in their homes or communities  
80 • **Treatment in Place (TIP):** IP is a service that involves treating patients at the scene of an  
81 emergency instead of transporting them to a hospital.

82

- 83 • **Quadruple Aim:** The expansion of the Triple Aim (enhancing patient experience,  
84 improving population health, and reducing costs) to include an additional goal of improving  
85 the work life of health care providers.

86

87 **Analysis:**

88 Each year in the United States, there are more than 1 billion visits to physician offices and as  
89 many as 140 million visits to emergency rooms, these numbers are expected to grow as our  
90 population ages. A report by the Association of American Colleges (AAMC) estimates that  
91 by 2034, there will be shortages of up to 48,000 primary care physicians and 77,000 non-  
92 primary care physicians. Access to primary care physicians varies across the nation with  
93 some communities having vast resources while others have sparse or no resources at all. The  
94 number of Americans ages 65 and older is expected to increase from 58 million in 2022, to  
95 approximately 80 million by 2050 (47% increase). According to a Fair Health Report,  
96 individuals 65 years and older were consistently the largest age group associated with  
97 emergency ground ambulance service. Studies suggest that approximately 15% of all  
98 Medicare beneficiaries transported to the emergency department by EMS were either  
99 nonemergent or emergent and could have been managed by a primary care provider, costing  
100 the health care system approximately \$1 billion dollars per year. Additionally, unplanned  
101 readmissions cost Medicare \$26 billion dollars annually, with an estimated \$17 billion spent  
102 on potentially avoidable hospitalizations. Unnecessary hospital admissions put additional  
103 stress on the health care system especially in areas that have limited hospital in-patient  
104 capacity.

105 **Less beds, increased cost, and an aging population:**

106 In 1975, there were approximately 1.5 million hospital beds in the US, by 2022, this number  
107 had decreased to roughly 917,000. In 2022, CDC data revealed that national healthcare  
108 expenses grew 4.1% to \$4.5 trillion, or \$13,493 per person, and accounted for 17.3% of gross  
109 domestic product. During this same period, hospital expenditure grew 2.2% to \$1,355 billion  
110 dollars.

111 Elderly Americans face significant challenges, from age related health struggles, rapidly  
112 rising obesity rates, transportation challenges and socioeconomic disparities in health care  
113 access that include increased caregiving gap. The demand on the US health care system is  
114 already stressed and with a rapidly aging population, the demand will only grow in the future  
115 years to come.

116

117        **Rural Challenges:**

118        Approximately 80% of rural counties covering more than 30 million people are classified as  
119        healthcare deserts and access to local care is challenging. For individuals that live more than  
120        30 miles from a medical provider, transportation can be limited or not available leading to the  
121        inability to receive preventive health care services. Individuals in rural areas are more likely  
122        to die from preventable and treatable causes including heart disease, stroke, chronic  
123        respiratory disease, and cancer when compared to those that live in suburban and urban areas.  
124        In addition to the chronic and acute medical needs of older Americans, the nation has seen  
125        significant increases in individuals with both mental health and substance abuse needs all of  
126        which adds stress on an already struggling health care system.

127        Emergency, urgent, or unplanned care also is often disconnected from the patient's ongoing  
128        health care management, resulting in additional financial burden related to duplicate testing,  
129        an increase in the risk of medical errors, and a lack of communication and coordination  
130        between care teams and settings. MIHCP interventions have the potential to reduce several of  
131        these gaps in a fiscally responsible manner and contribute to the goal of the Institute of  
132        Healthcare Improvement's Quadruple Aim and Population Health initiative. Currently, most  
133        government payors in the US do not recognize or pay for MIHCP services. This greatly  
134        reduces the opportunities for MIHCP program growth and sustainment and does nothing to  
135        incentivize MIHCP program development. According to the National Association of State  
136        EMS Officials (NASEMSO), only five states have Medicaid programs that pay for MIHCP,  
137        while 14 states provide some type of payment for treatment without transport. Several  
138        MIHCP programs have contracted with hospitals, Accountable Care Organizations and/or  
139        directly with commercial payors to provide MIHCP services in the home or health care  
140        setting however, there is no uniform fee/payment schedule. Only by ensuring that MIHCP  
141        programs receive fair and adequate payment for services, can we continue to build and  
142        maintain access to MIHCP across the US.

143        **E. Strategic Vision**

144  
145        Mobile Integrated Health and Community Paramedic programs (MIHCP) will play a vital  
146        role in improving access to health care, including preventive, acute and long-term health  
147        care of individuals, reduce preventable hospital admissions/readmissions and cost to the  
148        health care system. MIHCP programs will seek opportunities to improve equitable access  
149        and delivery of health care to those with limited or no ability to receive the care that they  
150        require.

**F. Strategic Goals**

Goal 1: FICEMS members to work with CMS and payors to develop a model of payment for Mobile Integrated Health and Community Paramedicine services.

Goal 2: NEMSAC will continue to evaluate proposals for developing enhanced roles of MIHCP and EMS providers to meet the health care needs of our most vulnerable populations.
